8 Things to Know about Vaccine Planning

Updated Oct. 14, 2020

In the United States, there is currently no authorized or approved vaccine to prevent coronavirus disease 2019 (COVID-19). Operation Warp Speed 🗹 has been working since the pandemic started to make a COVID-19 vaccine(s) available as soon as possible. CDC is focused on vaccine planning, working closely with health departments and partners to get ready for when a vaccine is available. CDC does not have a role in developing COVID-19 vaccines.

With the possibility of one or more COVID-19 vaccines becoming available before the end of the year, here are 8 things you need to know about where those plans currently stand.

The safety of COVID-19 vaccines is a top priority.

The U.S. vaccine safety system ensures that all vaccines are as safe as possible. Learn how federal partners are working together to ensure the safety of COVID-19 vaccines.

Many vaccines are being developed and tested, but some might be ready before others— CDC is planning for many possibilities.

CDC is working with partners at all levels of government to plan for different vaccines and scenarios. CDC is in contact with your state public health department to begin planning. State, tribal, local, and territorial health departments are critical to making sure vaccines are available to communities.

At least at first, COVID-19 vaccines might be used under an Emergency Use Authorization (EUA) from the U.S. Food and Drug Administration (FDA).

Learn more about FDA's Emergency Use Authorization authority and watch a video on what an EUA is.

There may be a limited supply of COVID-19 vaccines before the end of 2020, but supply will continually increase in the weeks and months that follow.

The goal is for everyone to be able to easily get a COVID-19 vaccine as soon as large quantities are available. The plan is to have several thousand vaccination providers available so no one will have to travel far to be vaccinated, whether it's at your doctor's office, retail pharmacy, hospital, or federally qualified health center.

Learn about how the federal government began investing in select vaccine manufacturers \(\text{\text{\text{1}}} \) to help them increase their ability to available realized and distribute a large area cost of COVID 40 consists

increase their ability to quickly make and distribute a large amount of COVID-19 vaccine.

If there is limited supply, some groups may be recommended to get a COVID-19 vaccine first.

Experts are working on how to distribute these limited vaccines in a fair, ethical, and transparent way. The National Academies of Sciences, Engineering, and Medicine (NASEM) gave input 1 to the Advisory Committee on Immunization Practices, which will make recommendations to the CDC director once a vaccine(s) is authorized or approved for use.

Making COVID-19 Vaccination Recommendations

CDC makes vaccination recommendations, including those for COVID-19 vaccines, based on input from the Advisory Committee on Immunization Practices. Learn more

At first, COVID-19 vaccines may not be recommended for children.

In early clinical trials for various COVID-19 vaccines, only non-pregnant adults participated. However, clinical trials continue to expand those recruited to participate. The groups recommended to receive the vaccines could change in the future.

Cost will not be an obstacle to getting vaccinated against COVID-19.

The federal government is committed to providing free or low-cost COVID-19 vaccines. Vaccine doses purchased with U.S. taxpayer dollars will be given to the American people at no cost. However, vaccine providers will be able to charge administration fees for giving or administering the shot to someone. Most public and private insurance companies will cover that fee so there is no cost for the person getting vaccinated. In addition, people without health insurance can get COVID-19 vaccines at no cost.

COVID-19 vaccine planning is being updated as new information becomes available.

CDC will continue to update this website as plans develop.
